

DHANESH RAO KODEY

New Jersey | (856) 652-3601 | dhanehrao12@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#) | [LeetCode](#)

Java Full Stack Software Engineer with 3+ years of experience building **banking and enterprise applications using Java, Spring Boot, Spring Framework, Angular, TypeScript, REST APIs, Microservices, SQL, Docker, Kubernetes, and CI/CD**. Strong experience designing and developing **distributed backend systems, scalable microservices, secure API integrations, and Angular-based enterprise UI workflows**. Skilled in building reliable, maintainable, and high-performance applications with strong understanding of **system design, service-to-service communication, database optimization, fault isolation, observability, and production support**.

EXPERIENCE

Software Engineer | Bank of America, *San Jose, CA*

Jul 2025 – Present

- Designed and developed **Java/Spring Boot microservices** for banking workflows, supporting transaction processing, account-level operations, validation, audit logging, reporting, and internal business platforms.
- Built scalable backend APIs using **Spring Boot, Spring MVC, Spring Data JPA, Hibernate, and RESTful service design**, improving maintainability and service-level separation across distributed systems.
- Developed and enhanced **Angular-based enterprise UI screens** using TypeScript, HTML5, CSS3, and reusable components for operational dashboards, workflow management, transaction summaries, and business data views.
- Integrated Angular frontend modules with backend REST APIs, handling request validation, loading states, error handling, pagination, filtering, role-based UI behavior, and API-driven data rendering.
- Implemented microservice communication patterns using **REST APIs, service-layer orchestration, DTO mapping, exception handling, and centralized validation**, improving consistency across backend services.
- Worked with **PostgreSQL and SQL-based data models** for transactional records, reporting queries, audit data, and workflow state management, optimizing queries and indexes for high-volume read/write operations.
- Contributed to distributed system design improvements around **scalability, reliability, API performance, database access patterns, fault isolation, retry handling, logging, and monitoring**.
- Improved backend performance through **SQL tuning, API refactoring, caching strategies, and optimized service logic**, reducing repeated database calls and improving response time for critical workflows.
- Supported deployment and release activities using **Docker, Kubernetes, Jenkins/GitHub Actions, and CI/CD pipelines**, helping deliver stable releases across development and production environments.
- Participated in production debugging, root-cause analysis, code reviews, technical documentation, and Agile delivery, improving reliability and long-term maintainability of banking applications.

Software Engineer | Real Variable Digital Asset Services, *Hyderabad, India*

Aug 2021 – Aug 2023

- Developed full-stack enterprise features using **Java, Spring Boot, Angular, React, JavaScript, TypeScript, REST APIs, SQL, and NoSQL**, supporting financial and operational workflows.
- Built **Angular components, services, modules, forms, and reusable UI patterns** for data-heavy screens, improving frontend maintainability and user experience across business modules.
- Designed and implemented backend APIs using **Java, Spring Boot, Spring Framework, JPA/Hibernate, and RESTful services** for workflow processing, entity management, validations, and external integrations.
- Built and maintained **microservice-based backend modules**, separating business logic into reusable service layers and improving scalability, testability, and ownership across application domains.
- Integrated APIs with **external providers and internal systems**, improving automation, reducing manual effort, and enabling reliable data exchange between distributed services.
- Improved backend scalability using **Kafka, Redis, asynchronous processing, SQL tuning, and optimized API design**, reducing service latency by approximately 30%.
- Implemented unit and integration testing using **JUnit, Mockito, and frontend testing practices**, improving code quality and reducing defects during releases.
- Worked in Agile delivery cycles with code reviews, debugging, deployment support, and production issue resolution, contributing to stable and maintainable enterprise applications.

PROJECTS

Altersify — Real-Time Trading and Alerting Platform | *TypeScript, React, Java, SQL, Redis Streams, Aurora PostgreSQL, AWS, Docker, Kubernetes*

- Designed and delivered full-stack features for a real-time trading platform using **Java backend services, REST APIs, SQL, Redis Streams, and cloud-deployed infrastructure**.
- Built backend APIs for alert processing, trade workflows, broker configuration, user actions, and operational reporting using **Java, service-layer design, and SQL-backed persistence**.
- Improved real-time event handling using **Redis Streams**, enabling reliable alert delivery, duplicate prevention, and smoother downstream processing across distributed workflows.
- Worked with **Aurora PostgreSQL** for structured transactional data, reporting queries, user activity tracking, and trade-related workflow persistence.
- Supported deployment and production workflows using **AWS, Docker, and Kubernetes**, improving scalability, observability, and operational reliability.
- Implemented reliability improvements including request validation, audit logging, error handling, reusable service

patterns, and production debugging support.

SaverHunt — Full Stack Price Comparison and Social Commerce Platform | *TypeScript, React Native, Expo, Python, FastAPI, Supabase, Redis, Celery*

- Built a full-stack monorepo application with a **FastAPI backend** and **Expo-powered React Native frontend**, supporting price comparison, social commerce, onboarding, and personalized shopping workflows.
- Developed frontend screens using **React Native, TypeScript, and Expo**, including authentication flows, onboarding views, product discovery screens, deal feeds, and user interaction flows.
- Implemented backend APIs using **Python and FastAPI** for product data handling, user workflows, recommendation support, and integration between frontend and backend services.
- Used **Supabase for authentication and database storage**, supporting user login, session handling, and application data persistence.
- Integrated **Redis and Celery background workers** for asynchronous scraping and price-processing tasks, improving backend scalability and separating long-running jobs from API request flows.
- Designed the project with a clean full-stack architecture, separating **mobile frontend, backend engine, shared packages, API contracts, and background processing workflows**.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, SQL, Python,
Frontend: Angular, React.js, HTML5, CSS3, TypeScript, Component-Driven UI Development, Responsive Web Design
Backend: Java, Spring Boot, Spring Framework, Spring MVC, Spring Data JPA, Hibernate, REST APIs, Microservices, API Design
Databases: PostgreSQL, MySQL, SQL Server, Oracle, MongoDB, Redis, NoSQL
Cloud and DevOps: AWS, Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD, CloudWatch
Distributed Systems: Microservices, Service-to-Service Communication, Asynchronous Processing, Kafka, Redis Streams, Caching, Fault Isolation
Engineering Practices: Unit Testing, JUnit, Mockito, Code Reviews, Debugging, Agile Delivery, Production Monitoring, System Design, Performance Optimization
AI and Productivity: GitHub Copilot Concepts, ChatGPT, Claude, AI-Assisted Development

EDUCATION

Master of Science in Computer Science Rowan University, NJ	Sep 2023 – May 2025
Bachelor of Technology in ECE CBIT, Hyderabad, India	Aug 2018 – May 2022

ACHIEVEMENTS

- **Microservices Delivery:** Built and supported scalable backend features across **Java, Spring Boot, REST APIs, SQL databases, distributed services, and CI/CD workflows**.
- **Performance Optimization:** Improved backend performance through **SQL tuning, API refactoring, caching, asynchronous processing, and microservice-level optimization**.
- **Problem Solving:** Solved **1,000+ LeetCode problems**, building strong understanding of **data structures, algorithms, optimization techniques, and scalable problem-solving patterns**.
